DELETE MENU

The DELETE MENU command removes a telnet menu from use and frees the storage.

Syntax: DELete MENu ID=*id*

Arguments: ID= - The identifier from the DEFINE MENU command that created the menu you are deleting.

Example:

```
IPN237I delete menu,id=menuadm
IPN581I Menu MENUADM has been deleted.
```

Notes:
- Menus are only accessed by a telnet Daemon when a connection is requested.
- Deleting a menu while it is being displayed to a user causes unpredictable results.

Related Commands:

DEFINE MENU	-	Load a menu file and make it available for use by Telnet Daemons.
DEFINE TELNETD	-	Create a TN3270 or TN3270E Daemon
