DELETE ROUTE

The DELETE ROUTE command removes routing information from the TCP/IP for VSE internal routing table.

Syntax: `DELete ROUTe ID=id`

Arguments: ID= - The ID parameter specified with the DEFINE ROUTE command that created the route entry.

Example:

```
IPN237I delete route id=default
IPN581I Route DEFAULT has been deleted.
```

Related   DEFINE ROUTE   -   Add an entry to the TCP/IP routing table.
Commands: MODIFY ROUTE   -   Change values on an existing entry in the Route Table.
            QUERY ROUTES   -   Displays the content of the network routing table or the route
                                      taken to reach a specific address.
