

QUERY HOME

The QUERY HOME command causes a display of all IP addresses by which the stack is known and reachable.

Syntax: Query HOME [,SYSLst]

Arguments: SYSLst - If specified, the results of this request are sent to SYSLST. If omitted, the results are displayed on the console.

Example:

```
IPN237I query home
IPN253I << TCP/IP Home Addresses >>
IPN582I 127.0.0.1      Link *Internal
IPN582I 192.168.1.161 Main
IPN582I 192.168.1.161 Link LINK3172
IPN582I 192.168.1.162 ARP
```

Related	DEFINE ADAPTER	- Creates an adapter definition within the scope of a DEFINE LINK.
Commands:	DEFINE ALTIP	- Causes the stack to monitor and respond to ARP requests for additional home addresses.
	DEFINE LINK	- Create a link between TCP/IP and a network or to a directly-connected stack.
	SET IPADDR	- Establishes the default home address for the stack.
