RECORD

The RECORD command controls the recording of information about *TCP/IP for VSE* internal pseudo tasks.

Syntax:

```
RECord {ON|OFF}
```

Arguments:

ON - A completion record will by written to SYSLST following the completion of each pseudo task.

OFF - No information will be written upon completion of a pseudo task. This is the default.

Example:

```
IPN237I record off
IPN268I RECORD now set to OFF
```

Notes:
- The format of the data being recorded is subject to change with each *TCP/IP for VSE* release.
- The recording is performed by way of message IPN878I. See *TCP/IP Messages* for the format of this message.
