SET MAX_FTP_EVENTS

This commands controls how many simultaneous FTP events will be handled by Automation processing.

Syntax: SET MAX_Ftp_events=*num*

Arguments: *num* - Numeric, 1 through 9,999,999.

Example:

```
IPN237I set max_ftp_events=1
IPN268I MAX_FTP now set to 1
```

Notes:
- FTP transmission generally occurs quickly.
- Each FTP thread consumes an available FTP session; be sure that sufficient free sessions will be available.
- If FTP transmission requires auxiliary services, such as PDF conversion or encryption, consider how much CPU loading is appropriate for the TCP/IP partition.

Related Commands:

DEFINE EVENT	-	Monitor a POWER class for automatic report distribution.
QUERY EVENTS	-	Displays the status of automation processing.
QUERY FTPDS	-	Displays the status of the File Transfer Protocol Daemons.
SET MAX_EMAIL_EVENTS	-	Establishes the maximum number of simultaneous Email events for Automation processing.
SET MAX_LPR_EVENTS	-	Establishes the maximum number of simultaneous LPR events for Automation processing.
SINGLEDEST	-	Controls Automation multi-threading for events with the same destination host.
