SET POWERPASSWORD

The SET POWERPASSWORD command establishes a password that will be used for TCP/IP access to the POWER queues.

Syntax: `SET POWERPassword=string8`

Arguments: *string*8 - 1- to 8-character string, case insensitive

This password will be used for POWER access. Although there is no default value for this parameter, POWER access generally does not require a password.

Example:

```
IPN237I set powerpassword=fishbulb
IPN268I POWERPASSWORD now set to ++Suppressed++
```
