

# SET TELNET\_TRANSLATE

---

The SET TELNET\_TRANSLATE command specifies the name of a translate table to be used for line mode Telnet sessions initiated by the CICS line mode Telnet client, the batch client, programmable Telnet clients, and FTP control connections.

---

Syntax: **SET TELNET\_Translate=*name16***

---

Arguments: *name16* - The name of the translate table to be used by the Telnet client.

---

Example:

```
IPN237I set telnet_translate=us_eng_03
IPN804I Telnet translation will use US_ENG_03
```

- Notes:
- The name of the translate table is not checked for validity until it is needed. If the name is not valid, the system default translate table is used.
  - See the *TCP/IP for VSE Installation Guide* for more information about defining translate tables.
- 

Related Commands:	DEFINE TRANSLATION	- Load and control ASCII/EBCDIC translation tables.
	QUERY SET	- Displays the current values of modifiable parameters.
	QUERY TRANSLATES	- Displays a list of available translate tables.
