SUSPEND

The SUSPEND command suspends a *TCP/IP for VSE* pseudo task from further execution.

Syntax:

```
SUSPend taskid
```

Arguments:

taskid - Specifies the identifying hexadecimal task number of the pseudo task to be suspended.

Example:

```
IPN237I suspend 000d
IPN478I Task 000D suspended in phase IPNIGARB. Disp: 3,855
```

Notes:
- The suspended pseudo task is not changed in any way except that it is not eligible for dispatch.
- You can use the QUERY TASKS command to obtain the task numbers of *TCP/IP for VSE* internal pseudo tasks.
- The task number prefixes each console message displayed by *TCP/IP for VSE* tasks.
- You should suspend and resume *TCP/IP for VSE* pseudo tasks only if you know what you are doing.
