

TRUST

The TRUST command allows you to assign or remove an IP address's "trusted" status. A "trusted" IP address is never subjected to having its access to VSE revoked based on suspicious activity.

Syntax: TRUST {ADD|DELEte} ,IPAddress=*ip4addr*

Arguments: ADD - The specified address will be marked as "trusted".
 DELEte - The specified address will no longer be marked as "trusted".
 IPAddress= - Specifies the IP address that is to have its "trusted" status updated.

Example:

```
IPN237I trust add,ipaddress=192.168.1.66

IPN237I query trust
IPN253I << TCP/IP Trusted IP Addresses >>
IPN127I 192.168.1.66
IPN127I 192.168.1.1
12.182.34.168
```

Related ACCESS - Control access to VSE by IP address
Commands: QUERY TRUSTED - Displays the currently "trusted" IP addresses
