WAITFOR

The WAITFOR command suspends *TCP/IP for VSE* initialization until the specified event has occurred.

Syntax:

```
WAITfor VTam
```

Arguments:

VTam - Initialization pauses until the stack has detected that VTAM has initialized.

Example:

```
IPN237I WAITFOR VTAM
IPN394I Testing for an active VTAM partition
IPN395I Waiting for VTAM to become active
IPN395I Waiting for VTAM to become active
IPN396I VTAM is active and functioning
```

Notes:
- If WAITFOR is encountered as a command after the stack's dispatcher has become active, it is ignored.
